ASSIMILATE PHARMACEUTICALS

HELPING CLIENTS LIVE THEIR BEST HUMAN LIFE NOW

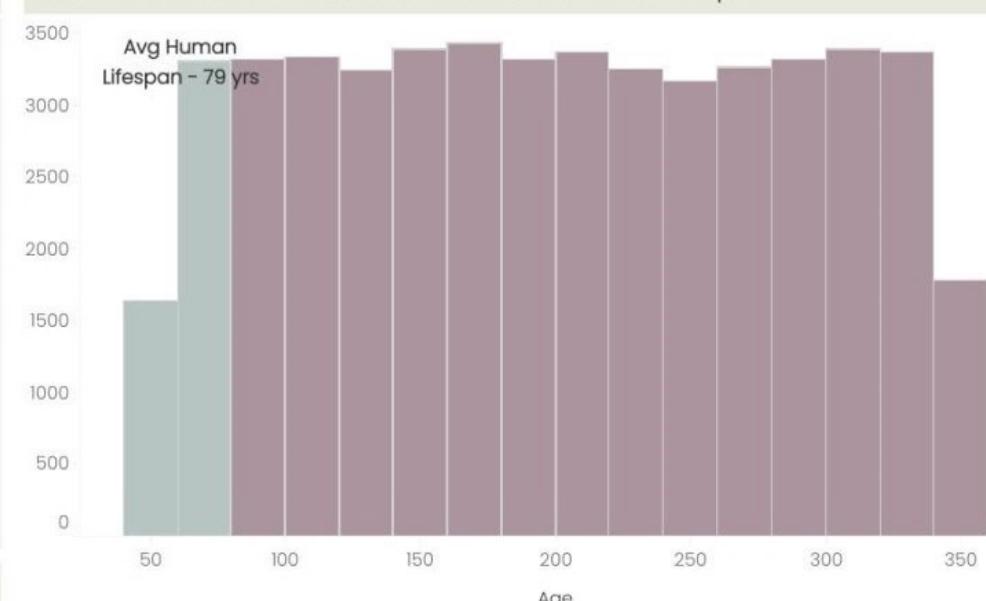

The growing **extraterrestrial populace** is an ideal market for expansion. There are many opportunities to market both supplements and pharmaceuticals. Based on demographic data, here are four market segments to target.

50,000 Potential Clients Across the US but 49.9% are hostile.

Target clients with hostility reducing medication in more populous hostile zones like Washington DC. State-wise, Texas, California and Florida all have the highest concentrations of potential clients.

Most clients far outlive the normal human lifespan.

Pharmaceuticals that simulate aging may be an ideal product across species.

Over half of potential clients eat less than once a week.

Squirrel is by far the most popular favorite food.

Pharmaceuticals that allow a simulated appetite and ability to digest human foods allow clients to interact over meals with other humans.

beaver flamingo capuchin sloth kangaroo wallaby starling cockatoo stork buffalo pelican possum monkey baboon crane eagle lizard macaw porcupine tern bird jackal fox armadillo bat heron bat cat otter lemur whale bear owl gull

Squirrel flavored medications may be the most palatable for our clients.

ALIENS IN AMERICA

Aliens! What you should know...

For many centuries the United States of America was inhabited by human alone.

Human discovered creatures different from themselves and they sought to study these creatures in order to understand their origin.

After many years of study, they realised these creatures could be of benefit to them and gradually they introduced them into the society.

These creatures are commonly called "Aliens", and they differ from one another.

Our goal as a pharmaceutical company is to help these aliens live their best human life as many of them desire to "fit into the society" a bit more, we'll be checking out areas to market our new "prescriptions" as you also know "a good market is good for business"

INSIGHTS AND RECOMMENDATIONS

The top 10 alien most populated states make up for 55.5% of the entire aliens in America, of which 54.3% of the aggressive alien population are also found in the top 10 alien most populated states.

Alien feeding habit will eventually pose a threat to wildlife on the long run if it's not well curtailed.

The average life age of aliens is 200 years which is way beyond the average human lifespan. These might cause them not to have lasting relationship with human.

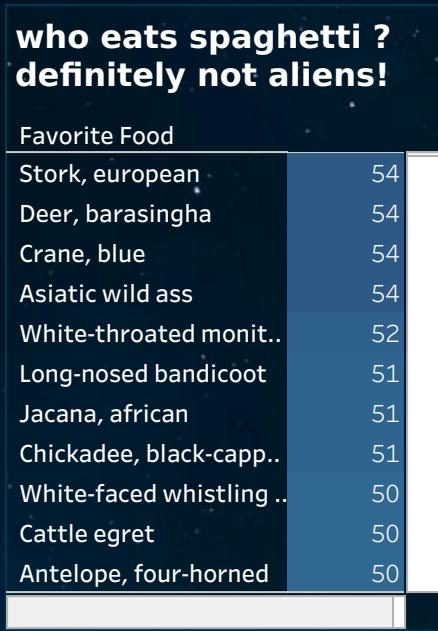

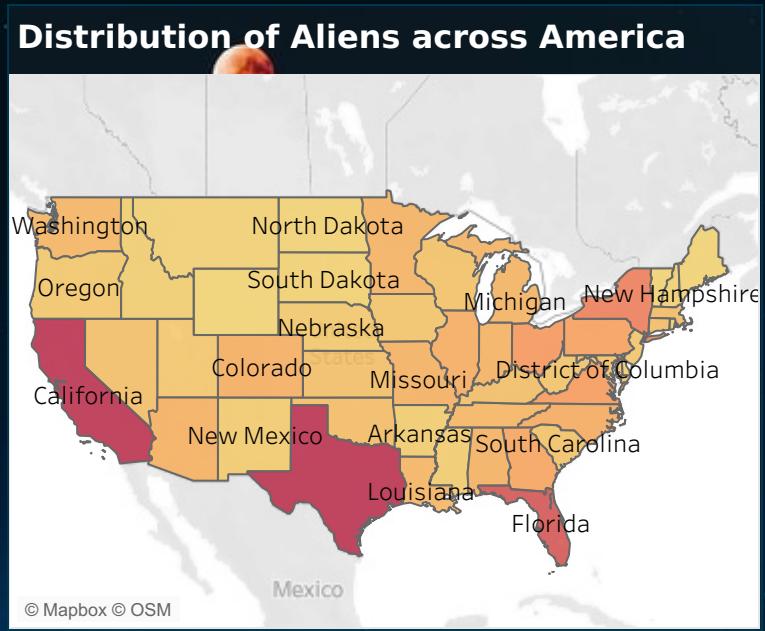

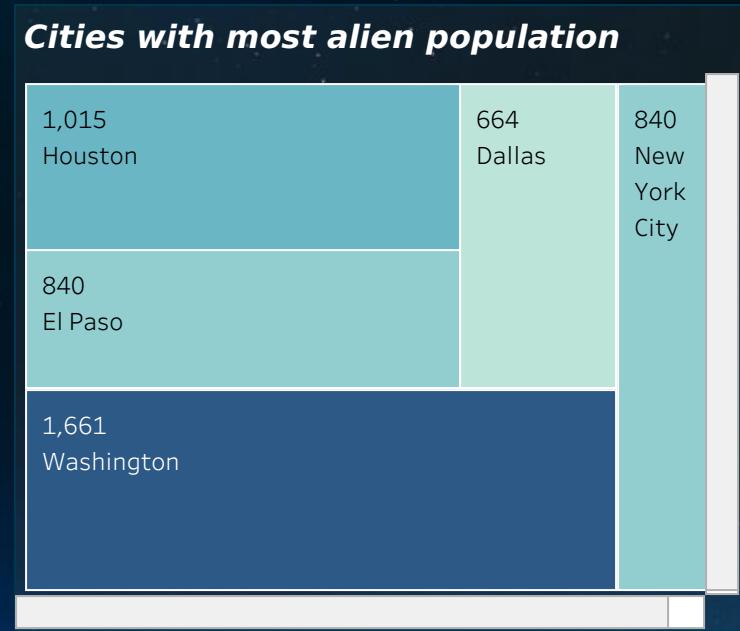

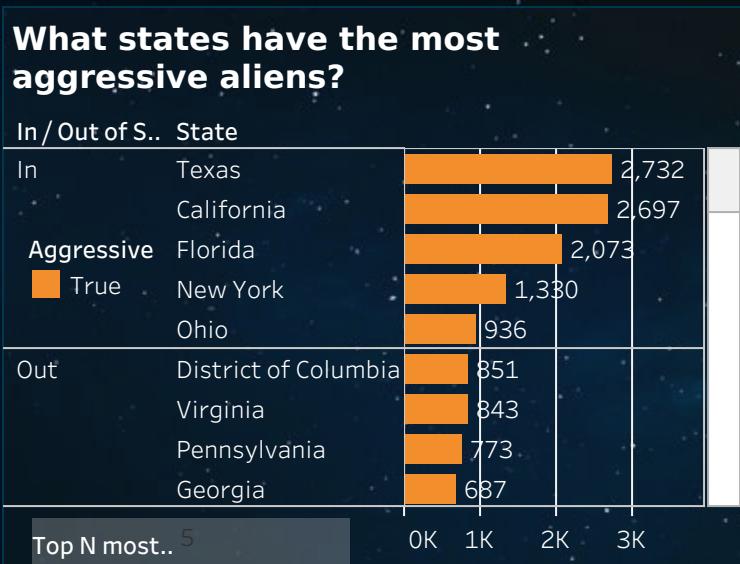

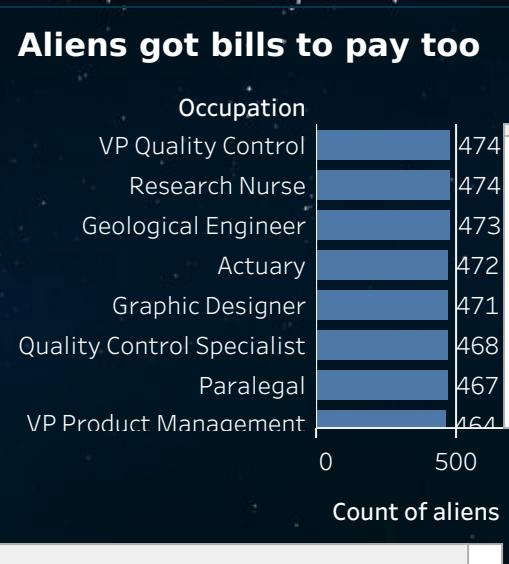

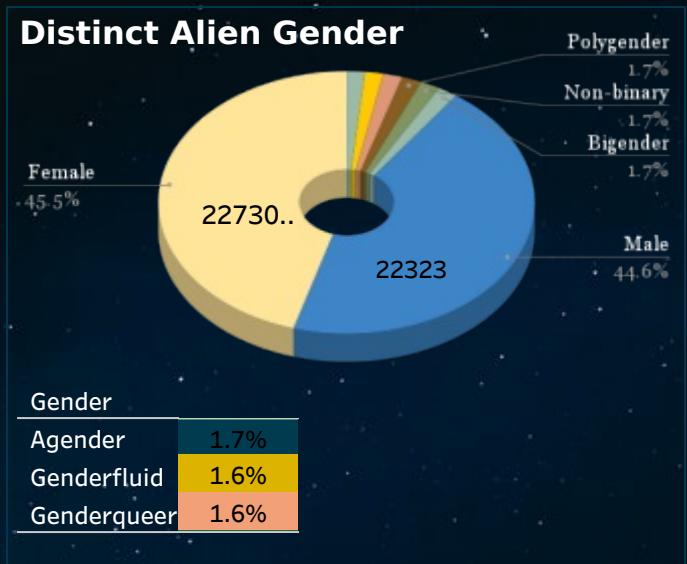

I recommend our prescriptions should be based on:

1) Aggression control: aggressive aliens should be given prescriptions to control their temperament so as to enable them associate more with humans.

2) Appetite control/stimulation: prescriptions that help digest human food can be made available.

3) Prescriptions could be made for controlling alien life expectancy (as long as it's what they desire)

- Since we are looking to enter the market newly, we can take advantage of the population size of aliens in the top 10 alien most populated states to market our prescriptions and our major focus will be current locations with high alien population.
